

Benefits

- Decrease Vacancies
- Implement Proactive Planning
- Improve Communications
- Increase Capacity
- Raise Productivity
- Track Real Time Updates

Features

- Alert Tags
- Digital Occupancy Display
- Monitor Transfers
- Multiple Monitors
- Room / Bed Management

Integrated With

- ADT/Census
- Room/Bed Control

Placement

- Admissions Office
- Housekeeping
- Kitchen

Usable Metatags

- Clean
- Close To
- Decertification
- Discharge
- Enteral
- Hospice
- LOA
- Oxygen
- Paint
- Quarantine
- Refurb
- Reserved
- Vent

Report Writers

- ADL Reportwriter
- Crystal Reports
- Fast Reports
- SQL Reporting Services

Visual Room View

Displays a color coded map of rooms and occupants. Determine at a glance the room and its occupants. Colors indicate the gender of the occupants. The display is updated in real-time as changes are made to the patient / resident census.

Settable Tags

Settable Tags display letter codes and colorful icons to indicate the Status and Services needed for the room / bed. For example, a bed can be tagged as Decertified and / or Unavailable.

Manage Admissions

Identify vacancies and expected discharges to quickly find available accommodations for prospective patients. Provides an easy way to keep track of the bed availability.

Room Management

Action Tags allow maintenance and housekeeping to recognize at a glance any services needed for the room. Improve communications and overseeing that the rooms are being properly serviced.

Multiple Monitor Support

For large facilities, information displayed can be divided over several display monitors. Small nursing units can be displayed in their own separate region on the screen.

Goodbye, Whiteboards

Benefit from the efficiency gained by replacing traditional whiteboards and phone tags by using large screen displays with color coded status indicators and automated alerts. Now your facility can have the same technology which in the past was affordable only by hospitals.
