

# The Analytics Power of

POINTRIGHT SOLUTIONS CENTER

## ► Your Challenges:

- Prevent compliance issues related to “access to care” or “inappropriate care.”
- More effectively manage the right quality mix in your census.
- Need to write/update care plans with every MDS assessment, but your care team doesn’t have time.
- Focus on reducing rehospitalization – and avoiding unnecessary hospitalizations – and you need to better understand which residents are at most risk.
- Gain actionable insights on your residents/patients so you can assure proper care:  
Who is at end-of-life? Who has dementia? Who would benefit from rehab or skilled therapy?

## ► PointRight Solution

Only RADAR™ and PointRight’s proprietary predictive analytics can provide your staff with the knowledge of who is at risk of being rehospitalized, how great that risk is, and if that risk is increasing.

## RADAR RESULTS

Only PointRight’s predictive analytics can enable you to gain insights faster and develop interventions to improve clinical outcomes and reduce risk:

- Identify resident risk for mortality within six months.
- Address advance care planning with residents and families.
- Make appropriate and timely hospice/palliative care referrals.
- Facilitate difficult discussions with residents and families about end-of-life care choices.

"We are utilizing PointRight's RADAR service to predict unplanned hospitalizations and we're using the frailty scale for triggering possible shifts in care planning. It is very helpful toward enabling us to provide the right level of care at the right time."

Wendy Davis, RN, BC, RAC-CT  
Regional Director of Clinical Services – FL  
Avante Group, Inc.

Analytics to Answers

**PointRight®**

As a value-added offering to the RADAR service, PointRight's clinical and analytics experts will consult with you, using the RADAR data output, to help support your business and clinical needs.

## ► Optimize Care Quality; Drive Down Costs

RADAR defines "analytics to action." This powerful service uses robust, predictive analytics together with the Minimum Data Set (MDS) to visually communicate clinical areas of impairment or risk, one resident at a time, enabling you to:

- Address a finite list of high-risk or highly impaired residents. Knowing the "who" catapults your staff into action.
- Gain early identification of at-risk residents and Quality Measure Alerts. The report includes proprietary hospitalization and frailty risk scales to identify residents most likely to be hospitalized and those nearing end-of-life, as well as risk scales for falls and pressure ulcers.
- Quickly identify those residents who are more impaired in several clinical areas to assist in care planning and allocation of resources.
- Predict changes in condition that your care plan coordinators can use to proactively identify declining residents.

The screenshot shows the PointRight RADAR software interface. At the top, there is a navigation bar with links for Location, Admin, Products, Training, Help, and Print. Below the navigation bar, the main content area has a title 'RADAR Report - MDS 3.0'. It displays a grid of resident profiles. Each profile includes a resident ID, name, room number, and date of birth. To the right of each profile is a series of numerical scores and risk indicators. A legend on the left side of the grid defines the symbols used for High Risk, High Risk with Decline, Decline, RI Resident Interview, and SA Staff Assessment. The bottom of the grid has a summary row for 'Profile Scores' across categories like Cognition, Delirium, Mood, Pain, Falls, Frail, Hosp, and PU.

## The result?

Your care plan teams can assess for trends, track decline, plan interventions for avoidable, high-risk outcomes and begin a dialogue with residents and their families about their care choices.

RADAR's descriptive scales focus on resident characteristics for ADLs, Cognitive Performance, Delirium, Mood, and Pain, while RADAR's predictive scales 'predict' an event within a specific period of time for Falls, Frailty, Hospitalization, and Pressure Ulcers.
