

# Point of Care Diagnostic Testing

“Made Simpler”

## Benefits

- Bedside Testing
- Real Time Results
- Rapid Diagnostics
- Claim Submission
- Full Documentation
- Avoid Hospitalizations
- Reduce Lab Costs

## Features

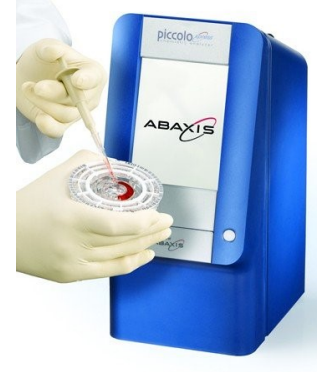

- Electronic Claims
- Export Charges
- EMR Integration
- Image Capture
- Real Time Results
- Preventative Care
- Workflow

## Supported Devices

- Abbott i-STAT
- Abbott Piccolo

## Integrated With

- ADT
- Health Change
- Abbott Piccolo

### POC Diagnostic Data for Reduced Re-Hospitalizations

Point-of-care Diagnostic testing employs portable blood analyzers like the Piccolo Xpress and the i-STAT Handheld to perform blood tests at the patient's bedside. Having instant laboratory results enables care takers to make quick, informed decisions regarding patients care. It provides real-time results, allowing care takers to administer preventative treatment to patients at the “point-of-care”. Diagnostic and monitoring devices such as these improves health care provided to patients, preventing re-hospitalization and other subsequent health complications.

### Instant Claim Submissions

One of the biggest obstacles with POC labs in skilled nursing facilities is the billing. ADL's POC software tracks all the tests allowing the facility to easily bill for all applicable tests.

### Solution

ADL's POC application covers the process from beginning to end. Easily manage required documents with our integrated software. It allows clinicians to enter the order the order with all required information, track the results and then bill for the test. Everything is comprised into one system.

### Integration with EMR

The diagnostic results can be integrated with your existing EMR via HL7 or Direct connections. This reduces paperwork and improves health delivery and organizes documentation efforts.
